

## CHABLIS

### VINES

The plot is located in the village of Préhy to the southwest of the Chablis vineyard on the Kimmeridgian, the upper layer of the Jurassic composed of clay and limestone, with a south-eastern exposure.

**Surface** : 7 ha

**Middle Age** : 40 years old

**Yield** : 55hL/ha

We practice a reasoned approach to viticulture having obtained the HVE level 3 label, which translates into ploughing which activates the organic and microbial life of the soil, partial grassing on certain plots and the use of natural fertilizers and treatments against diseases.

### VINIFICATION

After a long and delicate pressing, a cold settling of about twenty hours, the fermentation took place at around 16° to 18° Celsius using indigenous yeasts.

We carry out the malolactic fermentation on fine lees from November to mid-April then a light fining and filtration on earth in order to obtain a clear and stable wine before bottling by us at the estate.

The aging is done exclusively in stainless steel vats to preserve the freshness and fruitiness of the wine. These vats are thermoregulated which allows fermentations to be carried out at low temperatures in order to best develop the aromas of the wine.

### TESTING

With a bright, light yellow color, a fine and very fruity nose reminiscent of white-fleshed fruits and citrus fruits. The palate is supple and surprisingly fresh. A wine with surprising balance, with richness, freshness and the legendary minerality that characterizes the great years in Chablis. To be enjoyed as an aperitif, with oysters, seafood salad, Burgundy snails, or with fresh goat cheese.

Should be served between 10 to 12° Celsius and has a cellaring potential of 5 to 10 years.
